

**Project Title:** Robin Harn personal portfolio

**Project Type:** Coding Project

**Description & Rationale:** For my final project, I'll work on a personal portfolio website. In my free time this past year I've been digitizing board games into fully online implementations, which involves both design and coding. My hope is to create a platform to showcase those projects and organize them in a way that can be easily digestible by an average user. My target audience is prospective employers or network connections who might be interested in my personal project work.

**Project Goals / Deliverables:**

- Build a responsive website with Home, About, Portfolio pages
- Implement a hamburger menu for mobile view
- Implement form validation and submission in About section

**Week-by-Week Work Plan (21 hours total):**

Week 1; Nov 2nd-8th

- (1 hour) set up folder hierarchy, organize final project documents from canvas
- (1 hour) brainstorm personal portfolio content ideas
- (3 hours) collect all links and assets I need

Week 2; Nov 9th-15th

- (2 hours) build out sketches and initial html file framework
- (2 hours) do text copywriting of content

Week 3; Nov 16th-20th

- (3 hours) write html code
- (3 hours) write css code

Vacation; Nov 21st-27th

- (0 hours) out of town

Week 4; Nov 30th-Dec 6th

- (2 hours) implement forms into About page
- (2 hours) create github repo and do accessibility testing
- (2 hours) make final content adjustments

**Challenges & Questions (short paragraph):**

In my previous client project assignment I was surprised at the amount of time it took to collect image assets and edit them for consistency, so I set up more time in my planning process for that step. I also anticipate I might struggle a bit with form validation as that's a new topic for me and I couldn't get it to work in class yet. My backup plan is to attend office hours with Shalini to get help on that if I need it.
